

Instructions

All images on ScreenBackgrounds.net are designed to look great on large television screens.

Most images are created in high resolution to ensure they display clearly on modern 4K televisions.

To use an image:

1. Download the image from the website.
2. Copy the image to a USB memory stick.
3. Switch off the television and insert the USB stick into your television's USB socket. For best results, insert the USB drive into your television before turning the television on.

Many televisions will also detect USB drives when inserted while the television is already on, but behaviour may vary between manufacturers.

4. Switch on television and open the image or images using your television's media viewer.
5. Display the image full screen.

*These images are designed for modern widescreen televisions, particularly HD and 4K displays.

They may not display correctly on very old television types such as CRT (tube) televisions or non-widescreen displays.

Some televisions also allow you to set images as a slideshow or background display.

For best results:

- Use the highest resolution image available
- Set the display to "Fit to Screen" or "Full Screen"
- Turn off any zoom or stretch settings if the image looks distorted

If the image does not fill the screen correctly, check your television's picture settings and select options such as:

- Full Screen
- Fit to Screen
- Just Scan
- 16:9 Display Mode

For the best experience, display these images on large widescreen televisions.

The backgrounds are designed to be viewed from across the room and work well as relaxing ambient displays in living rooms or shared spaces.

They are not intended for small screens or mobile phones.

These images are designed to provide relaxing and visually pleasing backgrounds for your home environment.

Enjoy the atmosphere.
